

Sharks

There are about 400 different shark species in the world, although some are more well-known than others. You've probably heard of sharks like the great white, tiger, angel, and hammerhead. Did you realize that a shark's body is entirely boneless? Sharks can easily move in and out because their skeletons are made of cartilage. Sharks have great hearing and smell abilities. They have the ability to smell a single drop of blood in a big pool and can hear a fish swimming almost 500 feet away!

Answer the following questions.

Q1. How many species of sharks are there in the world?

A: _____

Q2. Name 2 well-known sharks.

A: _____
